## York Water District Conducted Leak Survey on Underground Piping

Annually the District will calculate “unaccounted for water” (UFW is the difference between the amount of water produced at the Treatment Plant less the amount of water that is used by Customers, Fire Departments and the District. Mid-season we noticed an unusual increase in production at the Treatment Plant.

During July and August the District hired New England Utility Management Enterprises, LLC, or NEUME to conduct a leak survey of our distribution system. NEUME performed an initial listening survey of hydrants, select gate valves and curb stops with the use of digital correlation technology.

We want to report that NEUME was successful in locating 2 substantial leaks in the system.

1. Seabury Road; a 6” main was leaking which was repaired by our crew, (Seabury road watermain is scheduled for replacement fall of 2015).
2. Axholme Road; a private residence had a leak in their water service line, (which was repaired by the homeowner).

The District also discovered and repaired 5 main breaks that occurred in the Distribution system. All sizable leaks that contributed to the increase in production.

1. Old Seabury Road
2. Raydon Road
3. Nubble Road
4. Woodbridge Road
5. Broadway

Please contact us if you have questions or concerns.
