## PUBLIC WATER SUPPLY UPDATE

*More Rain When We Need It Most - York Water District*

November proved to be a very beneficial month for Chase's Pond, York Water District's supply. A dry start to the month with only 0.5" of rain at the halfway point left us hoping for wet weather once again. Thankfully, the forecast was correct and the last half of November more than made up for the dry start. We received 4" of rain last month which is slightly above average rainfall. So far in 2016, we have had 31 inches of rain. This is 10+ inches below normal precipitation for the year. More wet weather as we head into winter will hopefully get us closer to average. Chase's Pond level has continued to gradually climb with a boost from the rain events this month. Since its lowest point in mid-October, Chase's Pond has risen 41 inches. This is only a few inches below our target level for this time of year! We expect the pond to continue to rise due to flowing brooks and streams in the watershed.

We are in a much better position compared to two months ago thanks to a few large rain events and water transfer from Kennebunk, Kennebunkport, and Wells Water District giving us the reduction in withdrawal from the pond that we needed. While the District hopes to see above normal rainfall through December, we must continue to be smart in managing our resource so we ask for your help in using water wisely.

The District would like to thank you for your patience and understanding during these unusual conditions. Please see [www.yorkwaterdistrict.org](http://www.yorkwaterdistrict.org) for periodic updates.
