

## **AT&T requests to add equipment to York Heights Water Tank**

**Posted May 28, 2019**

YORK -- The York Water District wishes to inform the public, that Smartlink representing AT&T Mobility has approached the district and would like to study the feasibility of installing cellular communication equipment on top of the York Heights Water Tank. Several steps need to be taken before the district's board of trustees can make an informed decision to advance this proposal. As part of the due diligence required, AT&T and Smartlink representatives will first initiate investigation and testing of the site for structural and technical feasibility. If the site proves to be viable, they will then provide the district with expected improvements in AT&T's wireless communications network in York along with photo simulations of the proposed installation to show the anticipated visual impact and demonstrate that the proposed site will meet or exceed all regulations and governmental standards for radio frequency exposure for both visitors to the site and the general public. A public meeting would then be scheduled by the York Water District to share the findings and receive public comment.
